

Mushroom Compost Certified Organic

Mushroom is an excellent all round soil improver and protective mulch for planting and feeding trees and shrubs as well as growing vegetables, exotic plants and flower beds. For new garden beds, turf and general landscaping, spread a 5-10mm thick layer of Mushroom across soil surface and incorporate to a depth of 50-100mm, then water thoroughly before planting. For individual plants, shrubs and trees, mix 1 part Mushroom with 10 parts original soil and use as a planting mix around root zone. As a potting mix ingredient, blend Mushroom at up to 25% of soil mix to significantly improve fertility and water holding capacity. For establishment and maintenance of exotic plants, flower beds and vegetable gardens, use Mushroom as mulch throughout garden beds at a depth of 25-50mm to conserve water, feed plants and suppress weeds.

Spent mushroom compost may not be suitable for growing mushrooms anymore but it is a fantastic product for home gardens and professional horticulture. The composted straw, manure, gypsum, peat and limestone make a perfect blend of rich organic materials to build soil health. Mushroom compost is a dual use product in the garden being a soil conditioner and a feeding mulch. When used as a mulch it fights soil erosion. It can also be incorporated into the soil before planting. Mushroom compost is guaranteed to be clean with no weed seeds, disease organisms or insect pests.

It has a dramatic effect on improving drainage in clay soils and holding moisture in sandy soils. With a water holding capacity of 300% of its own weight and a pH of between 6.75 and 7 it is very plant friendly. Use around fruit, vegetables and flowers or for establishing lawns for excellent results. Not suitable for acid loving plants.

Hazards Identification:

HAZARDOUS SUBSTANCE NON DANGEROUS GOODS

Due to the presence of fine organic dusts and mists (bio aerosols) that can be suspended in air and are both inhalable and respirable, these products are classified as hazardous substance.

SAFETY PHRASES

Do not breathe dust. Keep material moist whilst handling. Use only in well-ventilated areas. Wear suitable gloves. Wash hands after use. Avoid contact with eyes. Avoid contact with skin.
